Introduction

Many users of WordPress are already tired of the new look that version 3.8 brought to life. The admin interface has stayed the same for a long time. We think that the WordPress Admin dashboard need a revamp. Something fresh and beautiful. **So we decide to bring Material Design from Google to your Admin Interface!**

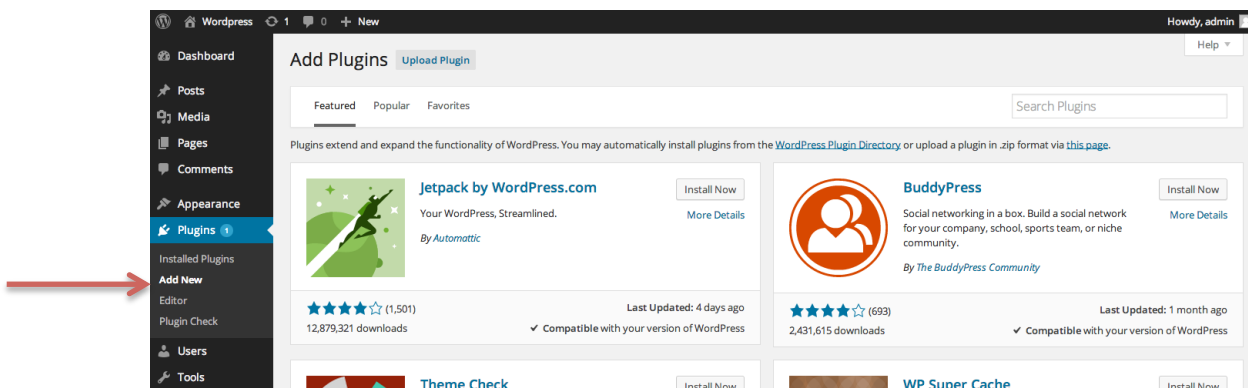

We hope you enjoy it and feel free to send any feedback to us at aandunque@gmail.com

Installation

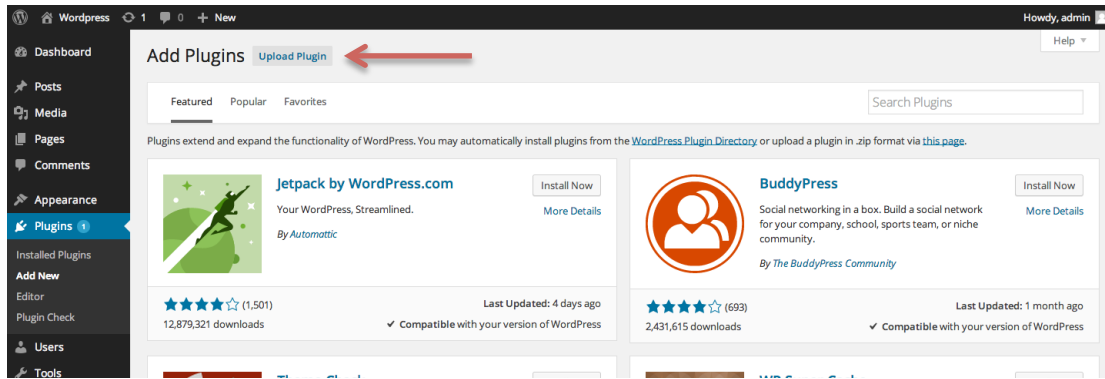

We basically have two ways of installing this plugin: using **Wordpress Plugin Uploader** or **using a FTP connection**.

Installation via Wordpress Plugin Uploader

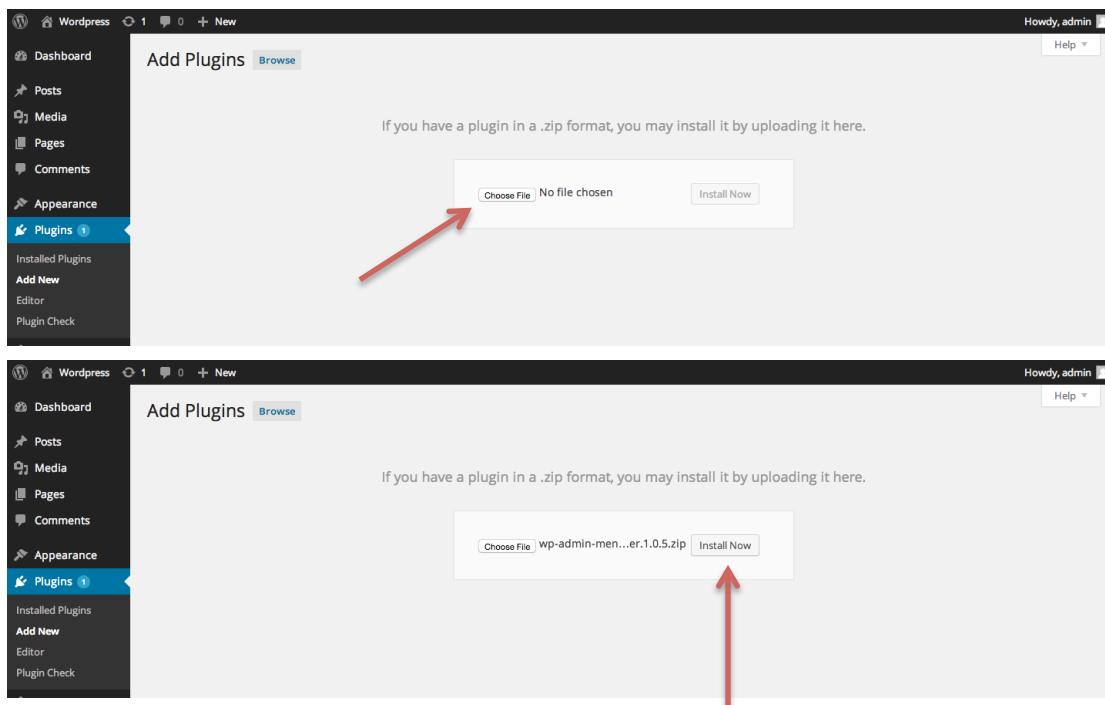

STEP 1: Go to the **Plugins** menu, on the Wordpress Dashboard Menu, and click on the link **Add New**.

STEP 2: Click on the button **Upload Plugin**, right beside the title **Add Plugins**, on the top of the page.

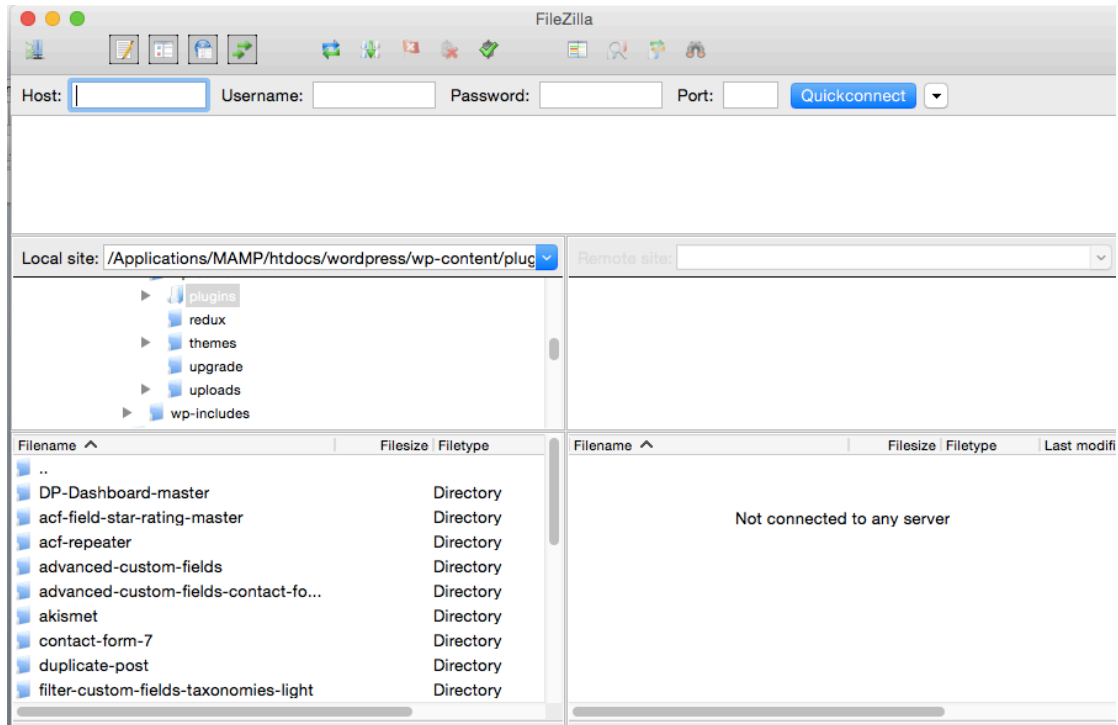

STEP 3: Use the **Choose file** button to select the .zip file that you downloaded after you purchase and then click **Install Now**.

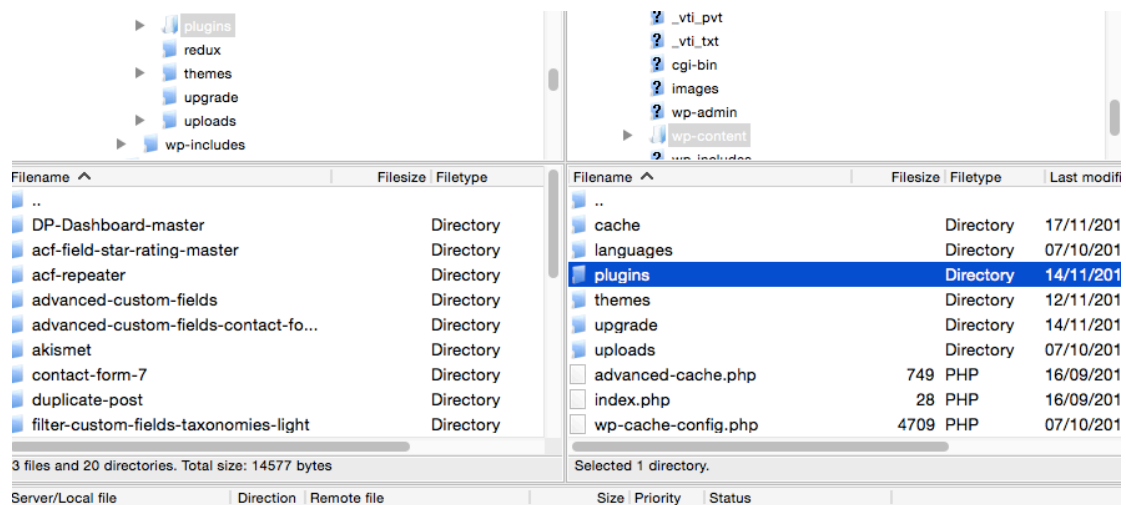

Installation via FTP Upload

First of all, we'll need to connect to your host using a **FTP client**. We highly recommend **FileZilla** (<https://filezilla-project.org/>), if you don't have one FTP client of your choice yet.

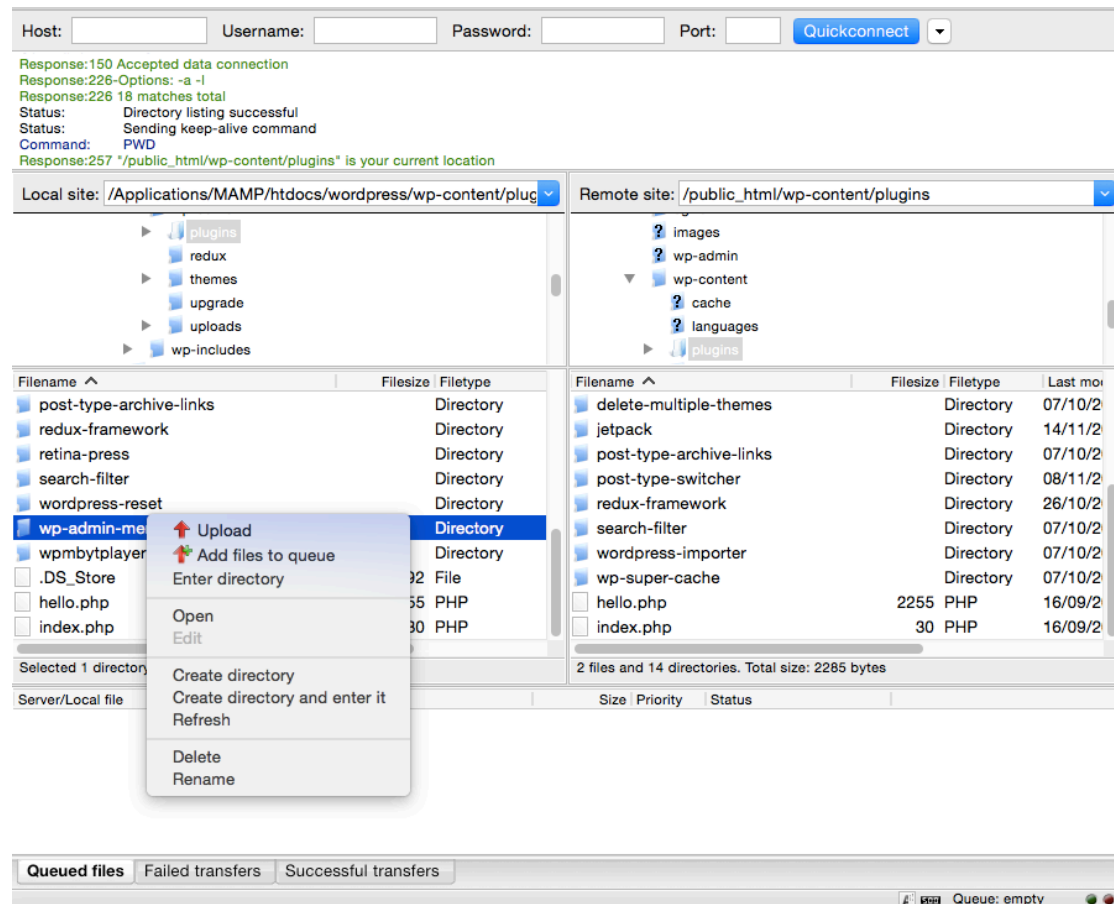

STEP 1: Connect to your remote host using your FTP client.

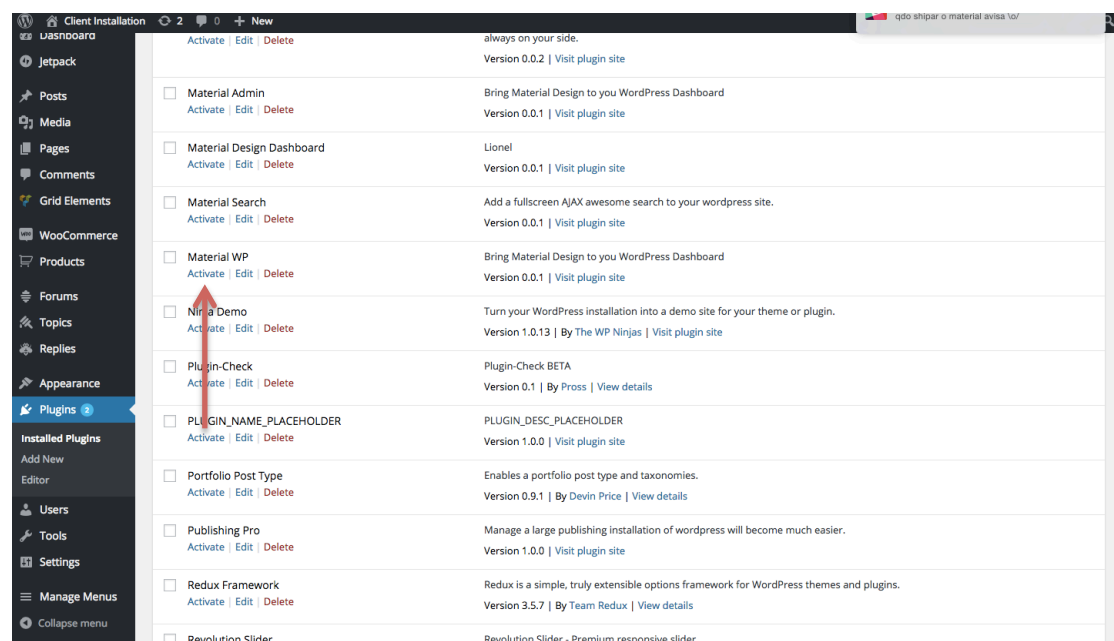

STEP 2: After connecting, navigate through your file tree to **wp-content/plugins**.

STEP 3: Drag or select upload on the context menu the plugin directory (**material-wp**) from the files you downloaded after your purchase to the **plugins** directory.

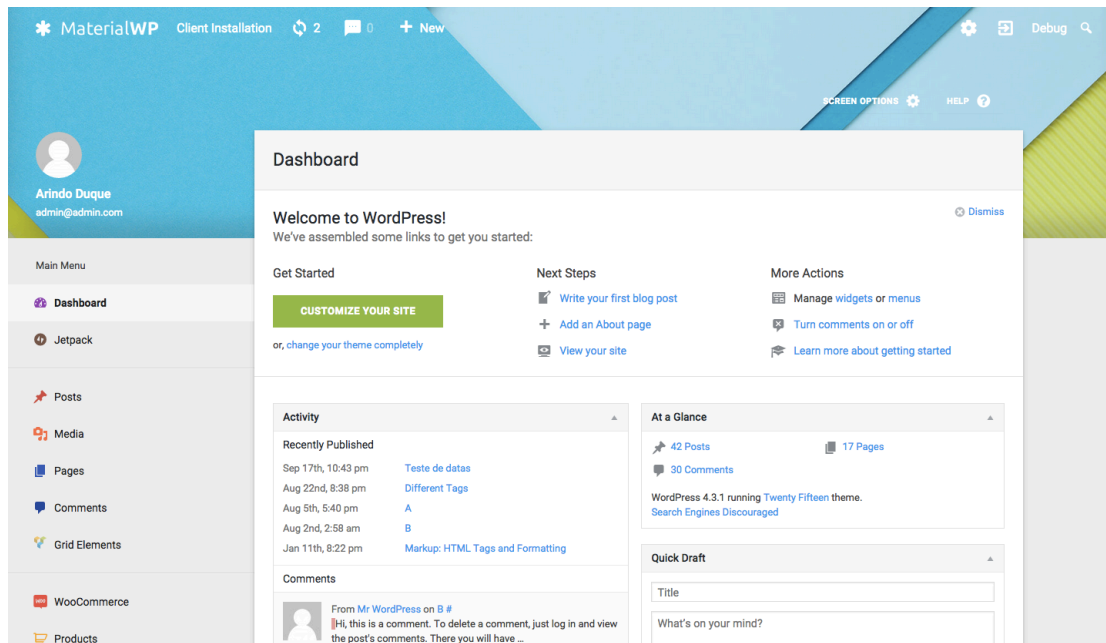

STEP 4: Go to WP Admin and, on the **Plugins** page, find the **Material WP** and click **Activate**.

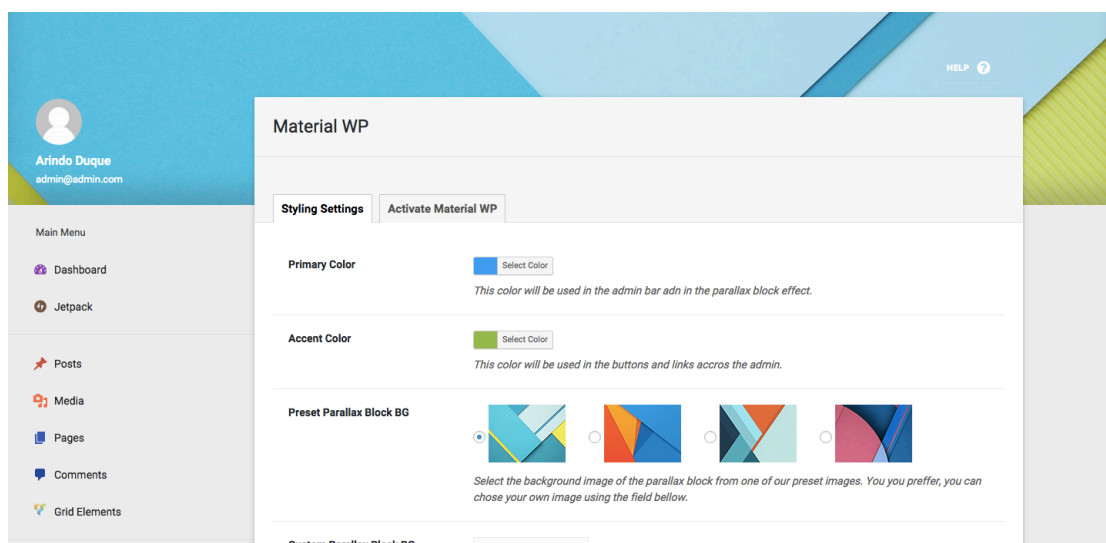

Material WP

After activating our plugin your Dashboard will be changed to the awesome Material Design styles. Like the image bellow:

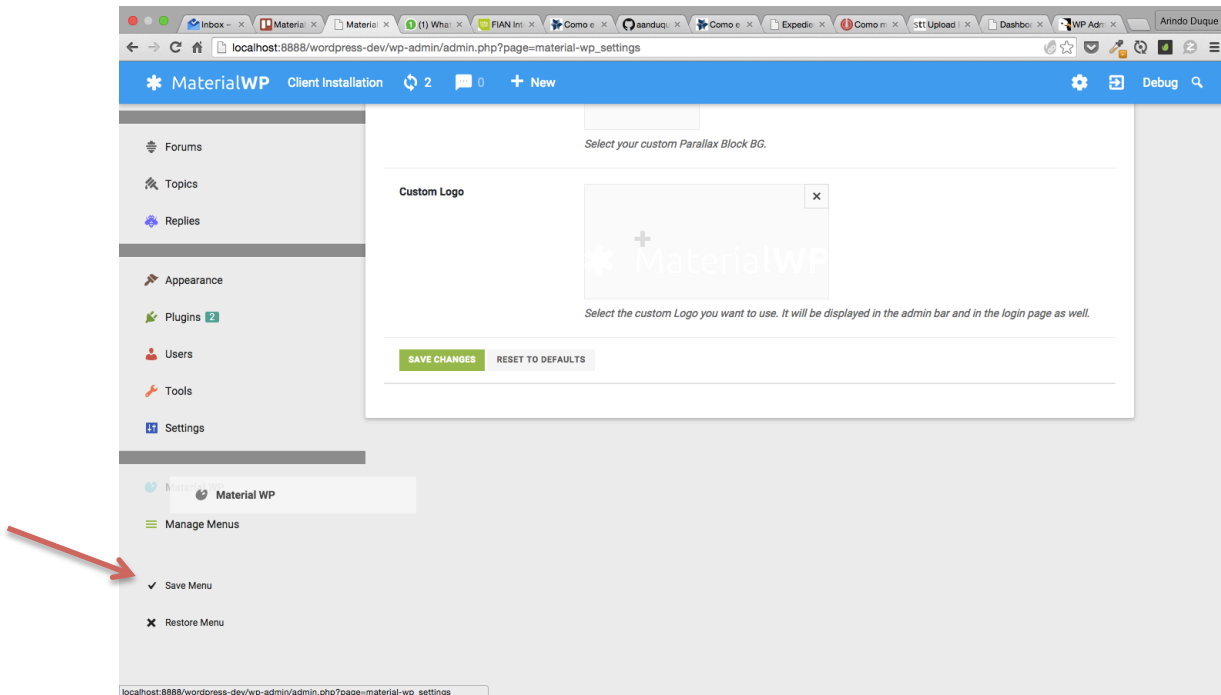

Customization Options

The plugin also provides you some cool customization options like setting a **primary color**, an **accent color** and the **parallax images** (that is also used in the login page form). You can change them by going to the menu **Material WP**, in the main menu.

Editing the Menu Order

We know that the admin menu sometimes need some changing. This plugin packs the feature of moving the menu items around, using a drag and drop interface. Just click **Edit Menu** in the bottom of the Main Menu and Drag item around.

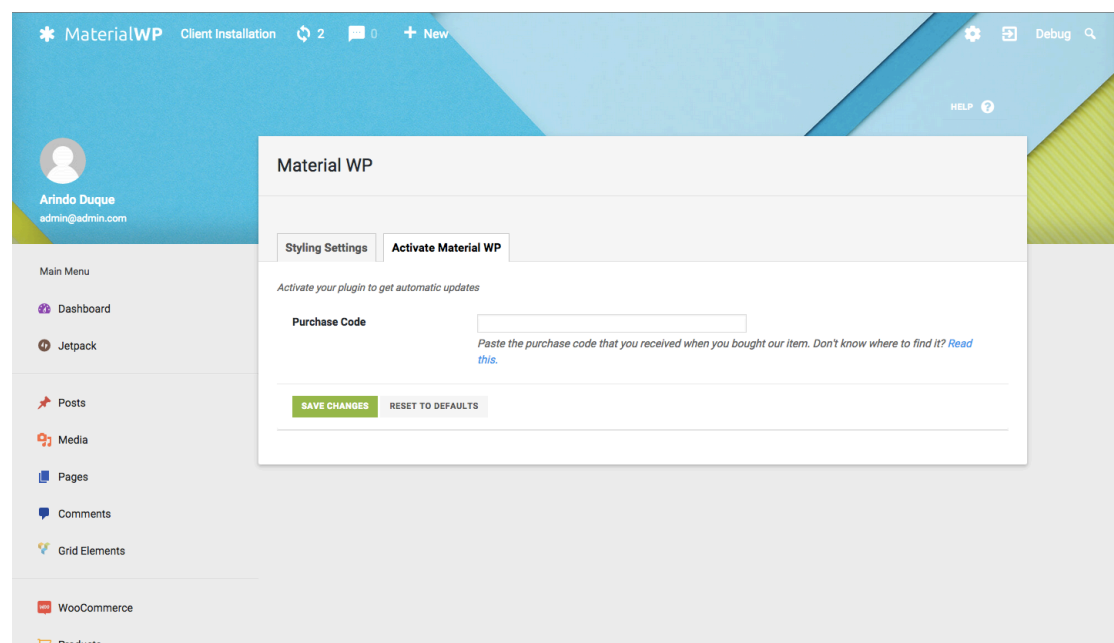

Enabling Auto-updates

We know how frustrating it can be to have to download a new version and reinstall it by hand every time we release a new version, a bug fix, etc. To make the life of our buyer easier we are shipping this version with a automated update system.

To enable automated updates, just go to “**Material WP**” and then to **Activate Material WP** tab, and put your purchase code in the field.

(If you don't know how to get your purchase code, follow this steps: <https://help.market.envato.com/hc/en-us/articles/202822600-Where-Can-I-Find-my-Purchase-Code->)

Click **save** and the auto-update feature will be enabled.

Any Doubts?

If you still have questions about the plugin or are experiencing issues, contact us on **aandunque@gmail.com**. We will get back to you as soon as we can.
